INCHARA ADIGANTE

Boston, MA | Open to Relocation | +1 857 271 8193 | adiganteinchara@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Data and AI/ML professional with experience building Python, SQL, Spark, and Snowflake pipelines, improving data quality and performance, and developing applied AI systems. Strong across ETL, analytics, cloud data platforms, GenAI, machine learning, APIs, and cross-functional problem solving.

EDUCATION

Northeastern University, Boston, MA **Sep 2024 – Dec 2026**

Master of Science in Information Systems | *GPA **3.8/4.0***

Relevant Coursework: Generative AI, Data Management and Database Design, Application Engineering and Development

Visvesvaraya Technological University, Karnataka, India **Jul 2019 – Jun 2023**

Bachelor of Engineering in Information Science and Engineering | *GPA **8.7/10***

TECHNICAL SKILLS

Programming	Python, SQL
Data Engineering	PySpark, Spark, Pandas, NumPy, ETL/ELT, Data Modeling, Data Quality, Pipeline Optimization
Cloud & Databases	AWS, Amazon S3, AWS Glue, AWS Lambda, Amazon Redshift, Snowflake, MySQL, MongoDB
Analytics	Power BI, Tableau, Splunk
AI/ML & Engineering	PyTorch, scikit-learn, LangGraph, LangChain, RAG, Pinecone, FastAPI, REST APIs, Git, Docker

EXPERIENCE

Skyworks Solutions, Woburn, MA **Jun 2025 – Dec 2025**

Data Engineer Co-op

- Built **Python, SQL, and Spark pipelines** across manufacturing, sales, and SAP data, standardizing **3 source domains** into reliable datasets used by finance, engineering, and operations teams for recurring reporting, analysis, and decisions.
- Cut a recurring reporting workflow **from more than 3 hours to under 10 minutes** by profiling SQL bottlenecks, removing unnecessary joins, and simplifying transformation logic while preserving business rules and downstream report accuracy.
- Automated checks for missing, duplicate, mismatched, and incomplete records, eliminating **15+ hours** of manual review each week while maintaining **99% data accuracy** through source-to-output reconciliation before recurring data releases.
- Designed **3 Power BI dashboards** from Excel tracking data, consolidating **25+ operational fields** into shared views that helped teams compare reporting periods, identify data gaps, monitor status changes, and review recurring business trends.
- Partnered with finance, engineering, operations, and analytics teams to define reporting needs, investigate data issues, validate transformation logic, and document changes before refreshed datasets and dashboards were released for use.

Accenture Solutions Pvt. Ltd., Bengaluru, India **Nov 2023 – Jul 2024**

Software Engineer

- Developed **Python, PySpark, SQL, and Snowflake ETL workflows** across **15+ scheduled jobs**, standardizing recurring transformations and producing reusable datasets for reporting, downstream analysis, and recurring operational data needs.
- Reduced runtime across **15+ scheduled workflows by 45%** by removing repeated transformation steps, simplifying dependencies, and tuning SQL processing, improving the availability of refreshed datasets for analysts and business users.
- Implemented **20+ Snowflake data-quality checks** for missing values, schema mismatches, integrity failures, and incorrect transformations, then traced failed jobs to affected stages and reran workflows to verify corrected outputs before release.

Bharat Electronics Limited, Bangalore, India **Jun 2022 – Dec 2022**

Data Engineering Intern

- Processed **12,000+ radar module test records** with Python and Pandas, standardizing voltage, signal strength, calibration status, and failure codes before loading results into MySQL to compare module behavior and identify recurring batch failures.
- Created **Power BI dashboards** across **4 engineering measures** (pass rate, calibration failures, defect codes, and module trends), helping engineers compare test batches, identify repeated failure patterns, and prioritize retesting and calibration reviews.

PROJECTS

Jobzilla AI | *LangGraph, LangChain, OpenAI API, Pinecone, FastAPI, RAG*

- Architected Jobzilla AI as a **4-agent workflow** for job analysis, skill matching, resume generation, and review, using LangGraph for orchestration, Pinecone for retrieval, and FastAPI to expose structured results through reusable application APIs.
- Evaluated agent outputs across **3 recurring failure categories** (missing context, routing errors, and inconsistent responses), then refined retrieval, prompts, and handoff logic to make end-to-end results more consistent across repeated runs.

Self-Supervised Graph Neural Network for EEG Analysis | *PyTorch, MNE-Python, DCRNN, Contrastive Learning*

- Modeled multichannel seizure recordings with a self-supervised EEG graph pipeline using **PyTorch, MNE-Python, and DCRNN**, contrastive learning, and attention to capture temporal and spatial relationships across EEG signals.
- Compared learned EEG representations across training runs and graph configurations, using reproducible preprocessing and model evaluation to study how temporal connectivity and attention affected seizure-pattern representation quality.

CERTIFICATION

AWS Certified Data Engineer – Associate (Credential) **Jul 2026**
